

# Wide-Bandwidth 4-Channel SPDT Video Analog Switch

#### 1 FEATURES

- Qualified for Automotive Applications
- AEC-Q100 Qualified with the Grade 1
- Wide Bandwidth: 220MHz
- Single Supply Operation +1.8V to +5.5V
- Low ON Resistance, 8Ω(TYP)
   Low Crosstalk: -60dB at 10MHz (TYP)
- Rail-to-Rail Operation
- Fast Switching Time
- Operating Temperature Range:
   -40°C to +125°C
- PACKAGES: TSSOP16

#### 2 APPLICATIONS

- Automotive Zonal & Body Domain Controller
- HEV/EV Battery Management System (BMS)

#### 3 DESCRIPTIONS

The RS2233-Q1 is a CMOS analog IC configured as a quad, bidirectional, single-pole/double-throw (SPDT) switches. This CMOS device can operate from 1.8 V to 5.5 V.

The select (IN) input control the data flow. The FET multiplexers/demultiplexers are disabled when the output-enable  $(\overline{OE})$  input is high.

The device are digitally-controlled analog switches. It has low on-resistance (8 $\Omega$  TYP) and low crosstalk (-60dB at 10MHz TYP).

The RS2233-Q1 is available in Green TSSOP16 packages. It operates over an ambient temperature range of -40°C to +125°C.

## **Device Information** (1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)		
RS2233-O1	TSSOP16	5.00mm×4.40mm		

(1) For all available packages, see the orderable addendum at the end of the data sheet.

# 5 PACKAGE/ORDERING INFORMATION (1)

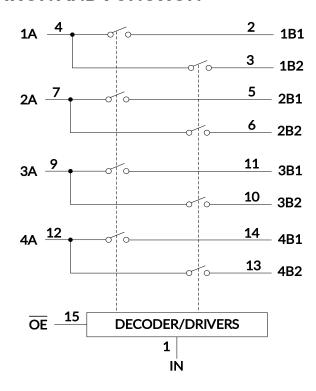

PRODUCT	ORDERING NUMBER	TEMPERATURE RANGE	PACKAGE LEAD	Lead finish/Ball material <sup>(2)</sup>	MSL Peak Temp <sup>(3)</sup>	PACKAGE MARKING	PACKAGE OPTION
RS2233 -Q1	RS2233XT SS16-Q1	-40°C~+125°C	TSSOP16	NIPDAUAG	MSL1-260°- Unlimited	RS2233	Tape and Reel,4000

#### NOTE:

- (1) This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the right-hand navigation.
- (2) Lead finish/Ball material. Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
- (3) RUNIC classify the MSL level with using the common preconditioning setting in our assembly factory conforming to the JEDEC industrial standard J-STD-20F. Please align with RUNIC if your end application is quite critical to the preconditioning setting or if you have special requirement.
- (4) There may be additional marking, which relates to the lot trace code information (data code and vendor code), the logo or the environmental category on the device.

# **6 PIN CONFIGURATION AND FUNCTION**

## **FUNCTION TABLE**

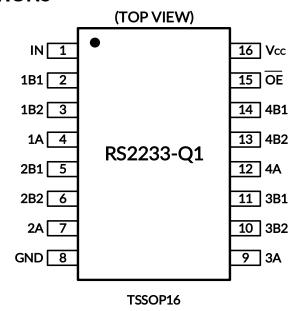

INI	PUTS	FUNCTION
ŌE	IN	FUNCTION
L	L	A port =B1 port
L	Н	A port =B2 port
Н	X	Disconnect

X=Don't care

NOTE: Input and output pins are identical and inter-changeable. Either may be considered an input or output; signals pass equally well in either direction.

# **7 PIN CONFIGURATIONS**

#### **PIN DESCRIPTION**

NAME	PIN	FUNCTION

4B1	14	Analog Video I/O.
ŌĒ	15	Switch-Enable Input.
V <sub>CC</sub>	16	Power Supply.

## **8 SPECIFICATIONS**

# 8.1 Absolute Maximum Ratings (1)

Over operating free-air temperature range (unless otherwise noted) (1)

SYMBOL	PARAM	PARAMETER				
V <sub>CC</sub>	Supply Voltage	Supply Voltage			V	
VIN	Input Voltage (All inputs)	-0.3	Vcc+0.3	V		
lıĸ	Input clamp current	V <sub>IO</sub> < 0		-50	mA	
θја	Package thermal impedance (2)		45	°C/W		
Τı	Junction temperature (3)	-40	150	°C		
T <sub>stg</sub>	Storage temperature		-65	+150	°C	

<sup>(1)</sup> Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

### 8.2 ESD Ratings

The following ESD information is provided for handling of ESD-sensitive devices in an ESD protected area only.

			VALUE	UNIT
		Human-Body Model (HBM), per AEC Q100-002 (1)	±2000	\/
V <sub>(ESD)</sub>	Electrostatic discharge	Charged-Device Model (CDM), per AEC Q100-011	±1000	\ \
		Latch-Up (LU), per AEC Q100-004	±100	mA

(1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

#### **ESD SENSITIVITY CAUTION**

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## 8.3 Recommended Operating Conditions

Over operating free-air temperature range (unless otherwise noted)

SYMBOL	PARAMETER	MIN	MAX	UNIT
Vcc	Supply Voltage	1.8	5.5	V
TA	Operating temperature	-40	+125	°C

7 / 15 www.run-ic.com

<sup>(2)</sup> The package thermal impedance is calculated in accordance with JESD-51.

<sup>(3)</sup> The maximum power dissipation is a function of  $T_{J(MAX)}$ ,  $R_{\theta JA}$ , and  $T_A$ . The maximum allowable power dissipation at any ambient temperature is  $P_D = (T_{J(MAX)} - T_A) / R_{\theta JA}$ . All numbers apply for packages soldered directly onto a PCB.

<sup>(1)</sup> Limits are 100% production tested at 25°C. Limits over the operating temperature range are ensured through correlations using statistical quality control (SQC) method.

<sup>(2)</sup> Typical values represent the most likely parametric norm as determined at the time of characterization. Actual typical values may vary over time and will also depend on the application and configuration.

<sup>(3)</sup> This parameter is ensured by design and/or characterization and is not tested in production.

<sup>(4)</sup> Flatness is defined as the difference between the maximum and minimum values of ON-state resistance over the specified range of conditions.

# **9 TYPICAL CHARACTERISTICS**

NOTE: The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only.

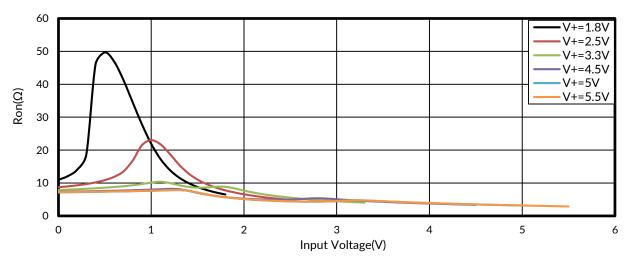

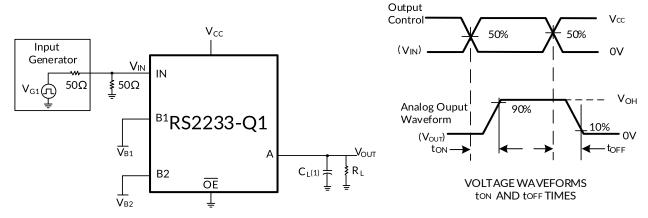

Figure 1. Typical Ron as a Function of Input Voltage

# 10 PARAMETER MEASUREMENT INFORMATION

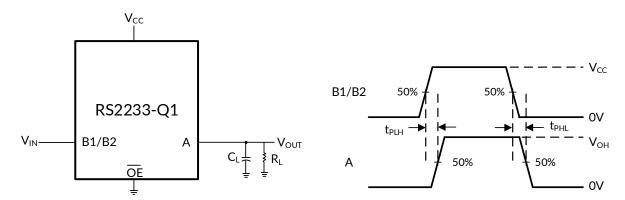

Test	Vcc	RL	CL	<b>V</b> <sub>B1</sub>	V <sub>B2</sub>
4	5V±0.5V	75Ω	20pF	GND	3V
t <sub>ON</sub>	5V±0.5V	75Ω	20pF	3V	GND
toff	5V±0.5V	75Ω	20pF	GND	3V
	5V±0.5V	75Ω	20pF	3V	GND

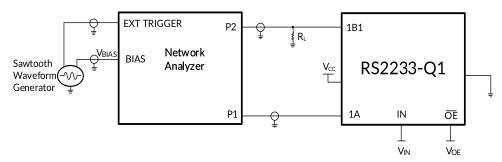

#### NOTES:

- 1.CL includes probe and jig capacitance.
- 2.All input pulses are supplied by generators having the following characteristics:  $PRR \le 10MHz, Z_0 = 50\Omega$ ,  $t_r \le 2.5ns, t_f \le 2.5ns$ .
- 3. The outputs are measured one at a time, with one transition per measurement.

Test Circuit 1. Test Circuit for Voltage Waveform and Switch Time

**Test Circuit 2. Test Circuit for Propagation Delay** 

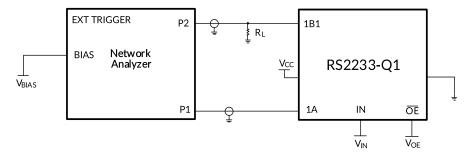

NOTES: Differential gain and phase are measured at the output of the ON channel. For example, when  $V_{IN}$  = 0,  $V_{OE}$  = 0, and 1A is the input, the output is measured at 1B1.

Test Circuit 3. Test Circuit for Differential Gain/Phase Measurement

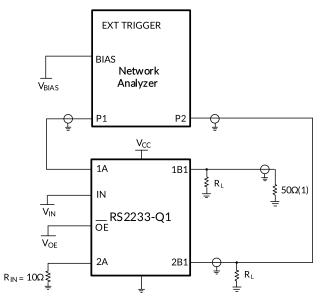

# PARAMETER MEASUREMENT INFORMATION

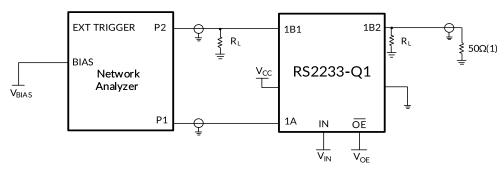

NOTES: Frequency response is measured at the output of the ON channel. For example, when  $V_{IN}$  = 0,  $V_{EN}$  = 0, and 1A is the input, the output is measured at 1B1. All unused analog I/O ports are left open.

**Test Circuit 4. Test Circuit for Frequency Response (BW)** 

NOTE: 1. A  $50\Omega$  termination resistor is needed for the network analyzer.

Test Circuit 5. Test Circuit for Crosstalk (XTALK)

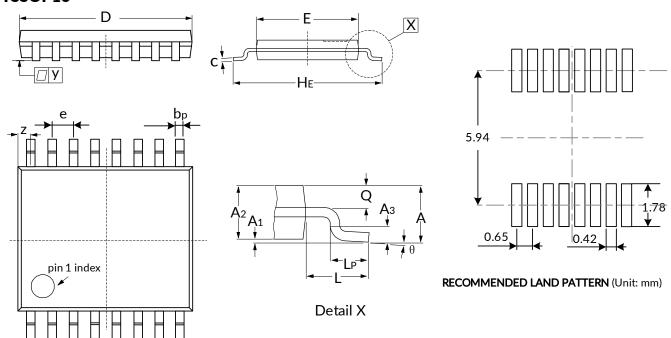

NOTE: 1. A  $50\Omega$  termination resistor is needed for the network analyzer.

Test Circuit 6. Test Circuit for Off Isolation (OIRR)
